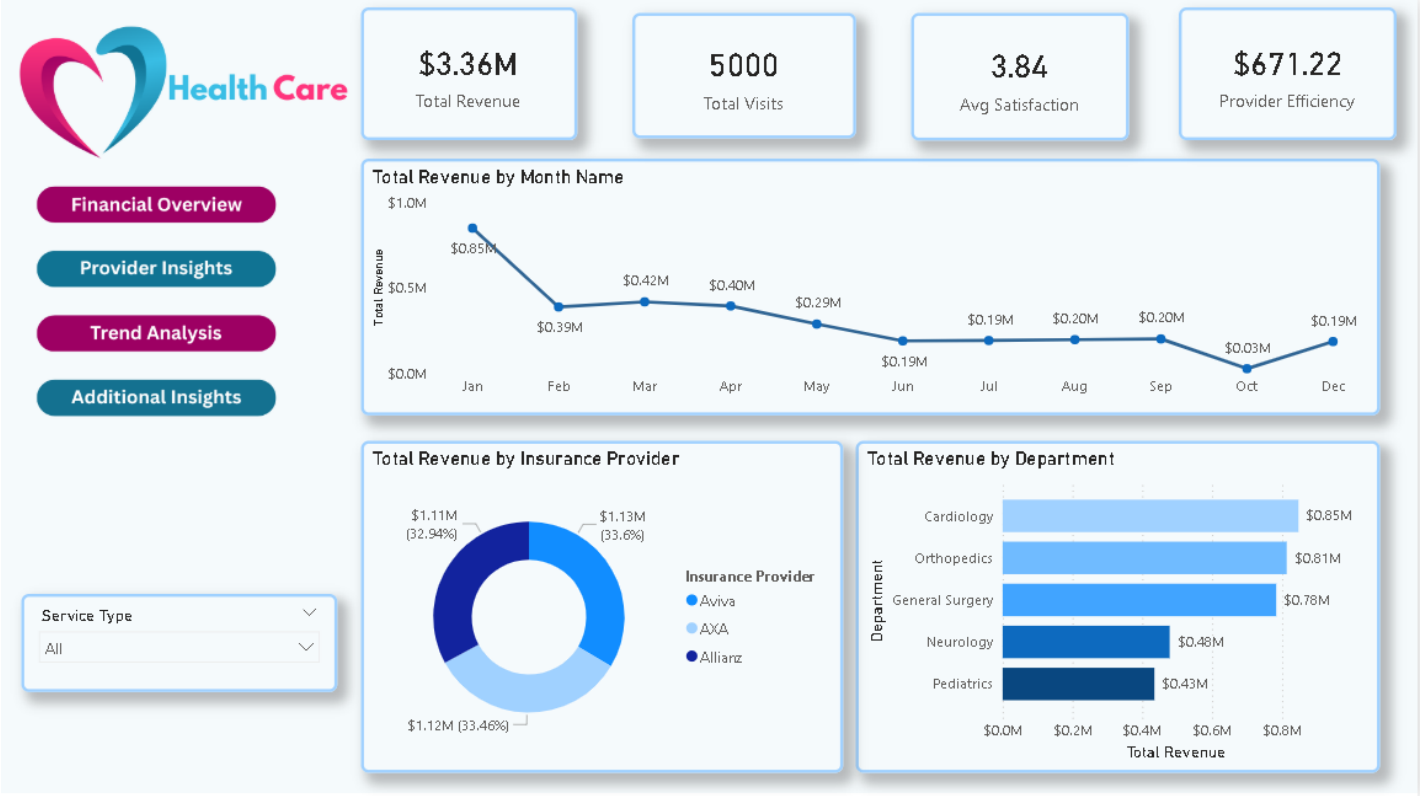
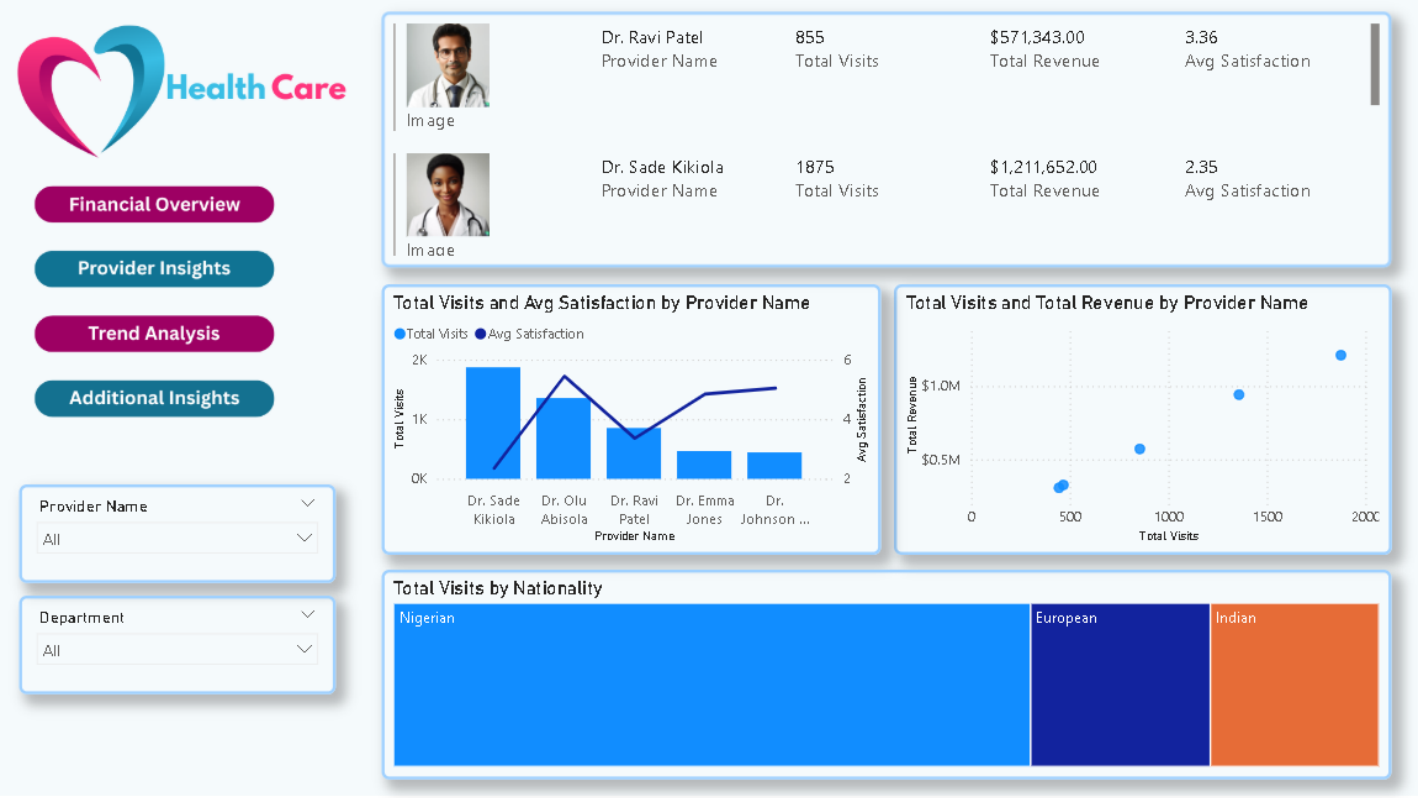
March 2026

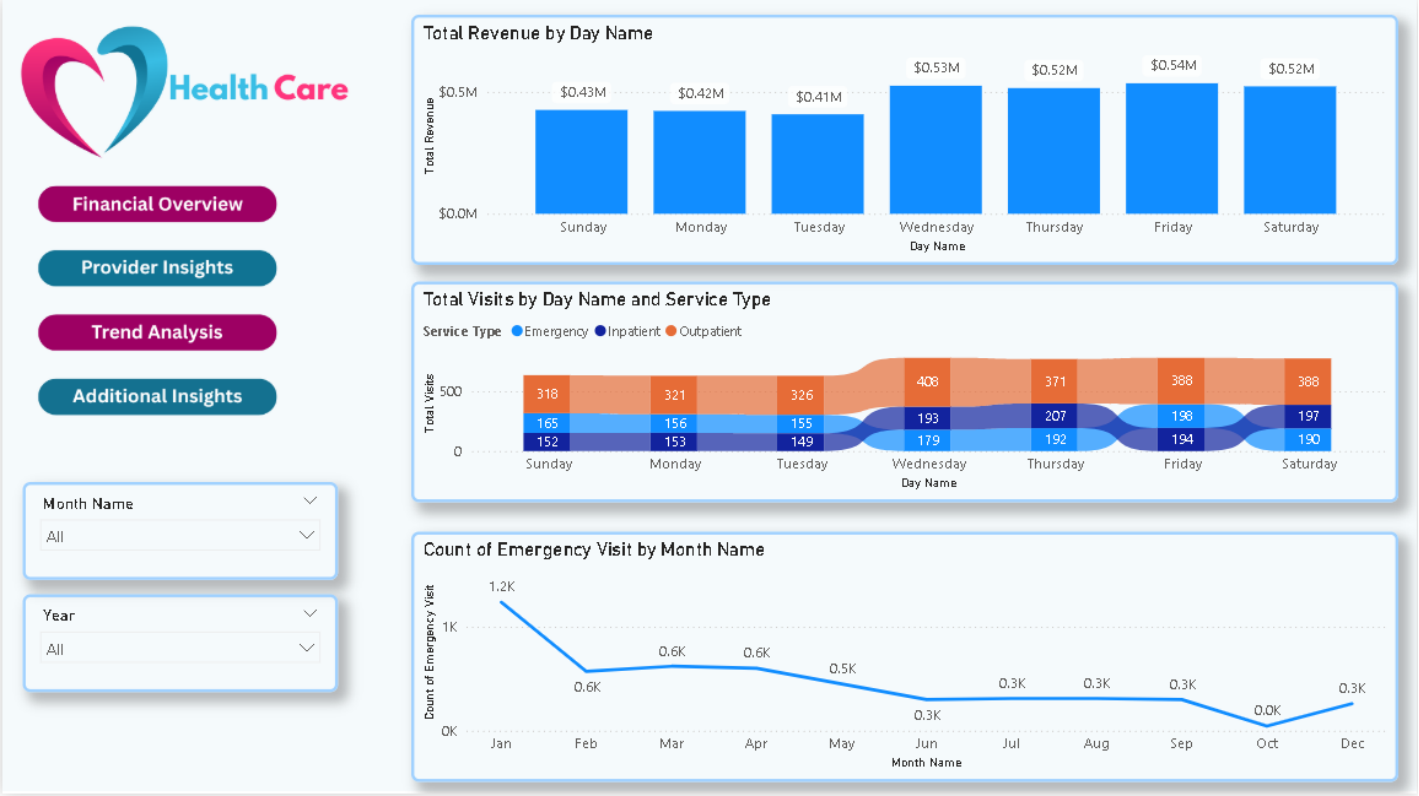
DASHBOARD 1: FINANCIAL OVERVIEW



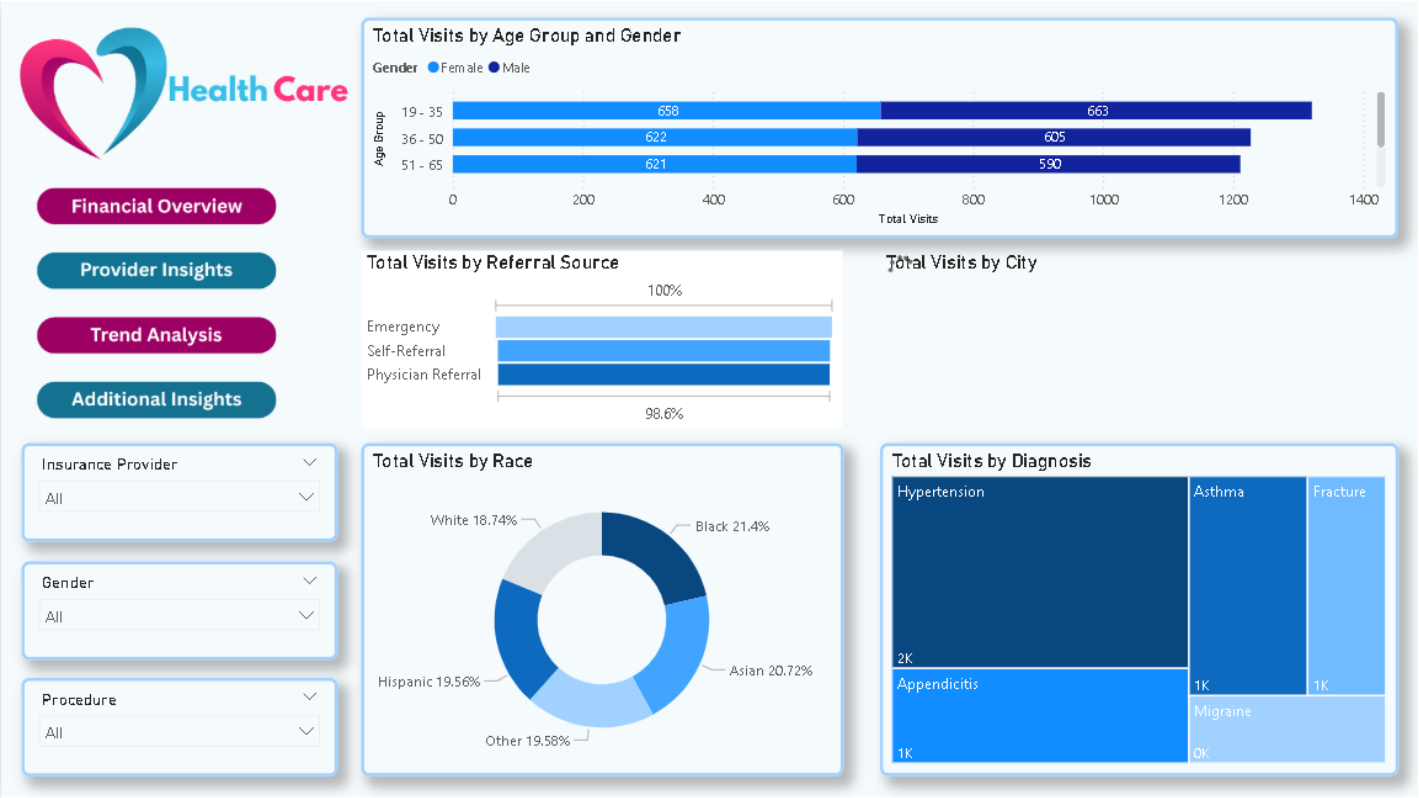
DASHBOARD 2: PROVIDER INSIGHTS



DASHBOARD 3: TREND ANALYSIS



DASHBOARD 4: ADDITIONAL INSIGHTS (DEMOGRAPHICS)



DASHBOARD 5: SUMMARY & CLINICAL FINDINGS

1. Financial Health & Revenue Drivers

The healthcare center is in a strong growth phase, generating a total revenue of **$3.36M**.

- **The "January Surge":** There was a massive performance spike in January 2025. This indicates either a seasonal health trend (flu/respiratory season) or a successful expansion in facility capacity.
- **Departmental Giants: Cardiology** and **Orthopedics** are your primary revenue engines. These departments should be prioritized for equipment upgrades and staffing, as they provide the highest Return on Investment (ROI).

2. Provider Performance & Efficiency

- **High-Volume Leaders: Dr. Sade Kikiola** is the operational anchor of the facility, managing the highest patient load and revenue.
- **Quality vs. Quantity: Dr. Olu Abisola** maintains the highest patient satisfaction scores ($5.4/10$) despite a heavy workload. This "Patient-First" model should be studied and shared as a Best Practice with other providers to improve the overall facility average ($3.84/10$).
- **Efficiency Gap:** There is a noticeable variance in "Revenue per Visit" among providers. Standardizing billing practices across departments could help recapture "leaked" revenue.

3. Patient Demographics & Clinical Trends

- **Chronic Condition Management: Hypertension** is the #1 reason for visits. The hospital should consider launching a dedicated "Hypertension Management Clinic" or wellness program to provide consistent, long-term care for this large patient segment.
- **The Referral Funnel:** With a high volume of **Self-Referrals**, the hospital has strong brand recognition in the community. However, increasing "Physician Referrals" through networking with local clinics could stabilize the patient pipeline.

4. Strategic Recommendations (The "Advice")

1. **Improve Patient Experience:** An average satisfaction score of **3.8/10** is a risk factor. I recommend implementing a digital follow-up system (as our data shows many visits lack recorded follow-ups) to engage patients after they leave.
2. **Optimize Room Utilization:** Since Inpatient revenue is significantly higher than Outpatient due to room charges, the hospital should analyze "Length of Stay" to ensure beds are turning over efficiently without sacrificing care.
3. **Prepare for Seasonality:** Based on the January trends, the facility should plan for increased staffing and inventory (medication/supplies) starting in late Q4 to handle the Q1 surge.
